1 The accounting module at a glance

The accounting module is the company's complete money system. Every delivery, fee, cash collection, payout, bill, salary and tax is recorded automatically in a double entry ledger, the same way an accountant would do it by hand. There is no other accounting software: reports, tax returns and the audit pack all come from here.

1.1 The ideas behind it

- **Everything books itself.** When a rider delivers an order, the cash, our fees, VAT, the rider's pay and the postal fee are recorded at that moment. Finance does not type sales by hand.
- **Nothing is ever deleted or edited.** A mistake is corrected by a new entry, so the history is always complete.
- **Two people for money.** Money coming in, and money going out above a limit you set (10,000 EGP by default), needs a second finance person to approve. Nobody approves their own request.
- **Proof for everything.** Receipts, slips and documents are attached inside the same form, before saving.
- **Closed months stay closed.** Once a month is closed, nobody can post into it.
- **Everyone sees only what they should.** Each person has a level (view, use or manage) and may be limited to some stores.
- **Every action is recorded.** Who did what, when, before and after.
- **English and Arabic,** on the computer and on the phone.

1.2 How it is organised

Accounting opens from its tile on the home screen. The top bar has one search box (type any document number such as PAY, BILL or JV) and eight menus:

Menu	What it is for
Dashboard	What needs attention today, approvals, payments coming up
Money in	Merchant wallets, paying merchants, invoices, what merchants owe us, cheques, emails
Money out	Expenses, suppliers and bills, purchase orders, petty cash, riders and rider offices, payroll, assets
Cash and bank	Cash position, store cash, bank matching, Basata deposits, frozen riders, missing receipts, loans
Reporting	Profit and loss, balance sheet, cash flow, profit per store and per merchant, the journal and more
Planning	Forecast and budgets
Month end	Close the month, close the books, year end, taxes
Setup	Chart of accounts, company tax details, contracts, cost tags, payout checks, opening balances

2 Dashboard

- **Quick actions:** Record an expense, Pay merchants, Match the bank, Close the month.
- **Today:** approvals waiting for you, payouts due, rider withdrawals, cash handovers with a difference, bank lines to match, bills due soon, entries missing a receipt, your reminders, last month's closing status.
- **Coming up and due:** every known payment grouped into overdue, this week and the next 30 days: recurring expenses, supplier bills, loan instalments, salaries, taxes, postal fees and merchant payouts. A full page shows 90 days. Finance gets a phone reminder a few days before (3 by default) and on the due day.
- **Cards** for each bank, the cash boxes, merchant payouts, supplier bills, invoices, rider withdrawals and approvals, with a 30 day trend line.
- **Approvals:** every request waiting for a second person, with approve, reject with a reason, and bulk approve.

3 Merchant money

3.1 What we charge merchants

Each merchant has a contract with its own prices; without one, the standard prices from settings apply. Every fee gets VAT (14%) on top. The fees are:

- Shipping fee per delivered order (many merchants have one all inclusive shipping fee)
- Order fee: a fixed amount plus a percent of the products value
- Cash on delivery fee: a percent of the cash collected
- Failed delivery fee, on every failed attempt
- Receiving fee per unit, storage per unit per month (charged daily), return fee per unit
- Packaging charge and per product prices, when the contract sets them
- Volume tiers (cheaper prices after a number of orders in the month), a monthly minimum, a security deposit and a credit limit

3.2 Merchant wallets

Each merchant has a wallet: cash we collected for them, minus our fees and VAT. Finance sees every wallet and statement, records money a merchant pays us, and makes adjustments with a written reason.

3.3 Paying merchants

1. **Prepare:** on each merchant's schedule (daily, twice a week or weekly), the system prepares what is owed up to a chosen day. A **Statement of Account (SOA)** is frozen at that moment: what was collected, every fee deducted, and the net to transfer.
2. **Approve:** payouts above the limit need a second person.
3. **Transfer:** a CIB bulk transfer file can be downloaded for all ready payouts.
4. **Proof of Transfer (POT):** the bank slip is uploaded for each merchant, with the amount and reference. The SOA, the POT and the payout must match exactly.
5. **Checks:** a second finance person confirms they viewed the SOA and POT. You can add more checks of your own.
6. **Mark paid:** only then the books move. The merchant sees the SOA and POT side by side in their wallet and gets both by email.

Payouts are never automatic, and a payout can also be paid by cheque.

3.4 Invoices and what merchants owe

- One tax invoice per merchant per month from the fees booked, with credit notes and debit notes, ready for the Egyptian electronic invoice system.
- "Who owes us, by age": merchants whose balance turned negative, grouped by how long, with automatic payment reminders.

- Cheques register: cheques received and issued, deposited, cleared, bounced or cancelled.
- Emails: every statement and notice sent to merchants, with resend.

4 Cash, riders and banks

4.1 Cash on delivery

- Cash a rider collects is held on the rider until handed in.
- **Two ways to hand in cash** (each can be switched on or off): at the store, where staff count it, or at a Basata branch, where the rider sends the receipt photo and finance approves it.
- **Daily deadline:** every rider must deposit all cash by 11 pm. What is left is deducted from the rider's supply office (or kept as a debt on the rider), and the rider is frozen until finance unfreezes them.
- **Cash limit:** a rider holding too much cash gets no more cash orders unless a store manager allows it.
- Differences in a handover wait for finance, who write them off or keep them on the rider.
- Cash position: banks, cash boxes, rider cash by age, money at Basata, merchants owed and bills due, all on one screen.

4.2 Rider pay and rider offices

- Riders earn a fixed amount per delivered order, no salary. Earnings are held for 5 working days, then the rider can ask to withdraw by cash, InstaPay, mobile wallet or bank. Anything the rider owes is taken off first.
- Rider supply offices earn a commission on their riders' pay, booked daily to the office's own account, with a monthly bill. Shortages a rider cannot cover are charged to their office.

4.3 Bank and loans

- **Bank matching:** upload the bank statement (Excel or CSV) and match each line to the books, mostly with one click; bank charges are booked in one tap.
- Bank accounts may also be in USD or EUR, revalued each month.
- **Loans** from banks only: amount, rate, months and the full schedule; instalments paid in order, interest booked as it is paid.
- **Missing receipts:** a list of money movements that still need a document.

5 Spending

- **Record an expense:** amount, category, store or the whole company, paid from which bank or box, VAT if any, and the receipt, all in one form.
- **Suppliers:** their own page with tax number, withholding tax rate, bills, payments and balance.
- **Supplier bills:** booked when they arrive and paid in one or more payments, keeping back withholding tax. Bills can be in foreign currency.
- **Purchase orders** for anything the company buys: packaging, expenses or assets such as laptops. Approved, received in parts, then billed.
- **Assets:** equipment depreciates automatically every month and can be sold or scrapped.
- **Prepayments** (such as rent paid ahead) are spread over their months automatically.
- **Recurring expenses** are prepared every month for approval, never paid by themselves.
- **Petty cash:** store staff pay small costs from the store box with a receipt photo; larger amounts wait for approval.
- **Packaging stock:** bags and boxes are tracked per store and their cost is charged to each order packed.
- **Expense claims:** employees claim costs they paid themselves; their manager approves and finance pays.
- **Money movements:** transfers between banks and boxes, owner capital and drawings, other income, and journal entries with several lines (for example rent and electricity paid together from the bank).
- **Cost tags** (for example "Ramadan campaign") to see costs by project.

6 Salaries and staff costs

- The monthly salary run calculates each employee's social insurance, martyrs fund and salary income tax, takes back advances and unpaid days, and pays the net.
- Employees see their own payslips in My HR.
- People hired through outsourcing companies are paid through their company's bill.
- Staff advances, bonuses and sales commissions are included.

7 Taxes and postal fees

- **VAT:** 14% on our fees; VAT we pay on purchases is claimed back. The monthly VAT return is built from the books.
- **Withholding tax:** kept back when paying suppliers, with the quarterly form 41 list.
- **Salary tax and social insurance** lists per employee each month.
- **Company income tax** estimate for the year.
- **Postal fee:** 10% of our fees on every shipment (delivered or failed) is owed to the postal office. It is our cost, never charged to the merchant, and paid once a month from the Taxes page.
- Every tax is paid from the Taxes page, never more than owed.

WORKED EXAMPLE

Our fees on a shipment are 100 EGP. The merchant pays 114 EGP (100 plus 14% VAT). We owe 14 EGP VAT to the tax authority and 10 EGP postal fee to the postal office.

8 Reports

- **Profit and loss, balance sheet and trial balance** for any period, compared with the previous period or last year, filtered by store or merchant. Click any number to see the entries behind it.
- **Cash flow:** where money came from and went (operating, investing, financing) and a four week forecast.
- **Profit per store** and cost per delivered order.
- **Merchant profit:** what each merchant earns us after all costs, with a "what if" price calculator.
- **Costs by tag, supplier bills by age, compare periods.**
- **The journal:** every entry, searchable and filterable. Each entry opens its own page with its lines, who made and approved it, its documents, and a printable voucher.
- Every list and report exports to PDF, Excel or CSV, and an audit pack (all books plus receipts) can be downloaded for the auditor.

9 Planning

- **Forecast:** the system builds its own forecast for the next 12 months from the last 3 months of real numbers: profit and loss, balance sheet and cash. You change the drivers (orders per day, growth, fees, salaries, rent) and everything recalculates. Keep several scenarios (Expected, Best, Worst) and compare them.
- **Budgets:** entered per quarter (Q1 to Q4) and split into months, for each store or the whole company. An approved forecast becomes the budget in one click. Actual against budget is shown for every month and quarter.

10 Month end and year end

- **Close the month:** a guided checklist (rider cash, bank lines, receipts, petty cash, invoices, payroll, storage, depreciation, VAT return), each item with a button to the screen that fixes it.
- **Close the books:** once closed, nothing can be posted into those days.
- **Year end:** moves the year's profit to retained earnings and closes the year.

11 Setup

- **Chart of accounts:** every account with its code; open banks, cash boxes and categories.
- **Company tax details** for invoices and the electronic invoice system.
- **Contracts and deposits** of all merchants.
- **Cost tags, payout checks, opening balances.**
- **Settings:** every price, limit and rule (VAT, approval limit, rider cash limit, Basata deadline, postal fee, reminder days and more) is a setting you can change, never fixed in the program.
